Overview

The locks, hardware and accessories that you install on your buildings all rely on the integration of the lock cylinder and the key. The lock cylinder and key constitute the keying system. The lock cylinder is central to the lock mechanism installed on your door. This combination controls who is allowed or denied access to the door.

ASSA ABLOY Australia Pty Limited manufacture a range of Lockwood Cylinders to suit residential and commercial applications.

With technological changes in the security industry, you now have a choice of how you wish to secure your premises and control the access throughout the building.

To begin with, you have a choice of a standard pin tumbler mechanism. This is a convenient system available in five and six pin variations and suitable for residential and commercial applications.

The next option is a keying system that incorporates features such as Design Registration and Patent Protection.

Control of the distribution of keys and keyblanks ensures that only authorised companies and individuals can purchase additional keys for your premises. e.g. Lockwood MT5 and Lockwood GEN6T® keying systems.

Only security professionals who have complied with strict guidelines are able to purchase certain Lockwood restricted keying system products. These professionals maintain your keying system by verifying that the authority criteria has been met.

Once you have established the type of keying system

that suits your needs, you can consult our Special Keying Advisory Service to determine the keying schedule for your building. This may be a Grand Master Key System, a Master Key System or the simplicity of one key convenience for your home.

Lockwood MT5

The MT5 Technology is the very latest used in Lockwood key systems. Two systems, MT5 and MT5+, use the technology which features the Alpha Spring, Telescopic Pins and Locking Bar. MT5 Technology offers the highest technical key copy protection of all Lockwood systems.

Lockwood GEN6T®

The range of key and barrel profiles in the Lockwood GEN6T system are Design Registered in Australia and New Zealand. This is a six pin inline keying system that is able to be transferred to a Lockwood GEN6T Service Centre, or can be maintained through our factory.

General Keying Profiles

Standard Lockwood cylinders and locks are available to be specially keyed to suit your individual requirements. This allows you to choose the keying access to suit your needs, without restricting access to key cutting.

The Pin Tumbler Mechanism

A standard pin tumbler cylinder with the key removed, showing the top pins held in their locking position across the splitline between the plug or barrel and cylinder.

The same cylinder with the correct key inserted, showing pin-breaks aligned with the splitline between the plug or barrel and cylinder, allowing the key to be turned.

The same cylinder with an incorrect key inserted showing the pin-breaks misaligned with the splitline, preventing the key from being turned.

Master Keying Information

Special Keying Systems

Most Lockwood locks with pin tumbler cylinders are supplied individually keyed. To provide extra convenience and security, specially keyed systems have been developed to enable the customer to control those locks which an individual is authorised to operate.

A specially keyed system designed to meet your individual requirements can be included in the specification of a new building or can be gradually introduced into an existing complex as old locks are replaced.

Specially keyed systems tend to grow as businesses grow. Therefore, align your keying needs with your projected growth.

Once you install a Lockwood specially keyed system, you open a permanent line of security. Our records enable duplicate keys or additional locks to be supplied with ease and accuracy, but only on receipt of an official order, with all special keying records kept in strictest confidence.

Keyed to Differ (KD)

With a keyed to differ system, each lock can only be opened by its own individual key. All Lockwood locks are supplied 'keyed to differ' unless a special keying system is requested.

Keyed Alike System (KA)

This system allows for a number of locks to be operated by the same key, it is ideally suited to residential applications such as front and back doors. There is no limit to the number of locks which can be keyed alike.

Master Keyed System (MK)

A Master Keyed System is one where each lock has its own individual key which will not operate any other lock in the system, but where all locks in the system can be operated by one master key.

Grand Master Keyed System (GMK)

The Grand Master Keyed System is an extension of the Master Keyed System where each lock has its own individual key and the locks are divided into two or more groups. Each group of locks is operated by a master key and the entire system is operated by one grand master key.

Maison Keyed System (MAIS)

This system is widely used in apartments, flats, office blocks, hotels and motels. Each apartment, flat or office has its own individual key which will not operate the lock to any other apartment, flat, hotel room or office but will operate the locks to communal entry doors and other services areas.

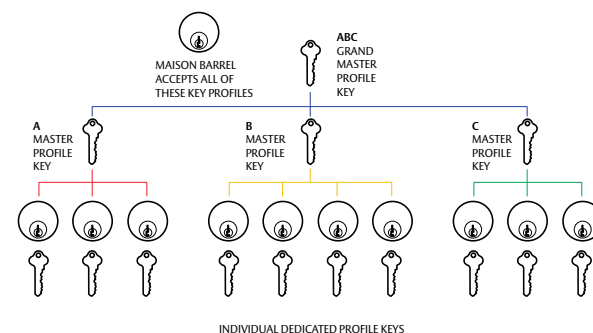

Construction Keyed System (CK)

A system where it is necessary for contractors to gain entry to a building during construction. Once construction is complete the owners keys will block further access by the contractors.

Multi-Element Profile Keying System (MEP)

A series of unique element key profiles where each element changes the overall shape of the profile. Each individual profile key will enter a dedicated keyway. The elements of some of these individual profiles in a group can be incorporated in one profile, resulting in a master profile key capable of entering all dedicated keyways in that group. Inclusion of all elements in the profile will result in a unique grand master profile capable of entering all corresponding individual keyways created by the elements in the series.

MT5 Keying Platform

The new concept – three mechanisms for more security

To guarantee the technical key security of a mechanical locking system it is necessary to select a system that is protected by key patents and also offers a high technical key copy protection. The new MT5 Locking System from Lockwood will achieve both of these.

Lockwood MT5 provides the highest possible level of protection against illegal key duplication via the revolutionary Alpha Spring. In addition every Lockwood MT5 key will be covered by patent protection well into the future.

There are two levels of security, the base level is the MT5 cylinder that uses a Telescopic Pin and Alpha Spring for restricted security. MT5+ builds on this by adding a locking bar for optimum security and high level master keying capabilities.

1. Alpha Spring

At the tip of the key is a revolutionary mobile interacting spring – the Alpha Spring. The Alpha Spring engages a unique pin at the rear of the cylinder mechanism creating another shearline.

The components of the MT5 Security System include the MT5 Key and the KC5 Key Cutting Machine.

2. Telescopic Pin

This new generation product is also based on a new configuration telescopic pin technology.

3. Locking Bar

The Locking Bar mechanism is the third technology featured in the MT5+ cylinder. Correct alignment of the locking bar pins depends upon the correct combination key being inserted into the cylinder. The milled pattern which runs along the length of the key interacts with the top bar horizontal pins, creating the required shearline.

For more information on this product visit
lockweb.com.au

MT5 Keying Platform

The MT5 Locking System

Alpha Spring

MT5 Keying Platform

Lockwood MT5 Originals are hard to copy

MT5 Key

All MT5 products have a double-sided unique MT5 key. One set of cuts are for the Telescopic Pin mechanism and the other cut, the milled pattern, is for the Locking Bar in MT5+ products. The MT5+ combination provides enhanced key security and a higher manipulation resistance.

MT5 cylinders with reversible key function. The key always fits, regardless of which direction it enters into the cylinder.

The KC5 Key Cutting Machine

Lockwood MT5 keys can only be cut through an authorised Lockwood MT5 agent on a dedicated Lockwood KC5 Key Cutting Machine. The super smart KC5 machine is electronically controlled and self calibrating meaning you get a perfect key every time!

The KC5 machine – for a perfect cut key every time!

GEN6T® Keying Platform

GEN6T

Description

The Lockwood range of legally protected keying platforms now includes GEN6T, an evolution of Lockwood's proven Generation Six platform. GEN6T uses the patent protected T Pin, giving legal protection to your restricted key system and offering security with the ability to control your keys.

Features and Specifications

- Nickel silver keys for strength
- Economical restricted keying platform for key control
- Lockwood proven design and manufacturing quality
- Colour coded inserts for key identification

Legal Key Control

Key control is fundamental to the security of your building. Legal protection has been afforded to the GEN6T keying platform in the form of patents in a number of countries including Australia and New Zealand.

Serviced Level System

GEN6T Serviced Level Systems are initially assembled by ASSA ABLOY Australia Pty Ltd.

Once the system has been supplied, the system records are available to be transferred to an approved GEN6T Authorised Service Centre.

GEN6T Authorised Service Centres

The use of a GEN6T Authorised Service Centre allows local servicing of your key system for day to day requirements. Each system is registered and signatory control applies to additional key requirements.

Identification of Keys

With a distinctive key head shape, individual keys within a master key system can be easily recognised through the use of colour coded inserts. There are a total of twelve colours to choose from.

Cylinders

There are numerous Lockwood cylinder variations available to suit the many different locks available in the Australian market. In pages 11–22 these are shown with detail on dimensions, available cams, finishes and platforms. The diagrams on the following pages have been provided for reference purposes. They are available in various keyways or profiles. For simplicity the keyway has been shown blacked out.

Standard Inline and GEN6T®

Inline keying systems such as standard keying and GEN6T have the keyway vertical as shown. Where a cam is required it will have the cam screws in a horizontal position.

Lockwood MT5 and MT5+

Lockwood MT5 systems have the keyway horizontal as shown. This also means different cams are required as the cam screws are set diagonally.

Used in many Euro style mortice locks including Lockwood Optimum and Defender Mortice Locks. Retainer screw is M5 thread.

Modular Cylinder Extensions

The Lockwood's new Modular Cylinder Extensions provide a simple and effective method of producing an extended cylinder. The onsite flexibility of this solution will save both time and money in all applications where extended cylinders are required.

Extended cylinders are often required where a door thickness of 50mm or greater, or when the mortice lock is mounted off centre in the door. The extra length in the cylinder is required to bring the face of the cylinder out from the door and escutcheon to enable use of the key.

Virtually any length cylinder can be made by stacking as many or as few extension pieces as required together and screwing them into the back of a special extended cylinder base.

The desired cam required for the special lock function is attached to the end of the extended cylinder and then it is ready for installation.

Cylinder

A special extended base cylinder is required as it has two tapped holes in the back of the cylinder to accept the assembly screws to retain the extension kits. These cylinders use the standard 570 type barrel. These

extended base cylinders are available in standard and Lockwood MT5+® Keying Systems with a universal barrel adaptor to drive the barrel extensions found in the extension kits.

Extension Kits

There are three different size extension kits that can be mixed and matched with the extended cylinder base to make up the desired length cylinder. They come in 7mm, 10mm and 24mm sizes. Each kit comes complete with the cylinder extension, barrel extension and universal barrel adaptor screwed to the barrel extension. Once the cylinder is assembled the rear barrel adaptor is removed and the standard locking cam (X, Z, Y, etc.) is fitted to operate the mortice lock.

Assembly Screws

There are four lengths of assembly screws that are available to hold the extension kit/s to the extended base cylinder, depending on the overall length required.

How to Order

You will need to order the extended base cylinder (in the required keying system), the extension kit or kits needed to make up the cylinder length and the assembly screws to hold the extension kits to the extended base cylinder. The end cam will then need to be changed for the required cam needed for the function of the mortice lock.

Modular Cylinder Extensions

Assembled product Standard

Part Number	Description
570E/SC	Extended Base Cylinder with "U" cam "C4" profile, keyed to differ with 2 keys
570E/50USC	50mm Extended Cylinder assembly with "U" cam. "C4" profile, keyed to differ with 2 keys
570E/65USC	65mm Extended Cylinder assembly with "U" cam. "C4" profile, keyed to differ with 2 keys

Note:

For other cylinder cam variants the end "U" cam can be removed and the required cam fitted. These additional cams are to be ordered separately.

Assembled product GEN6T

Part Number	Description
570EG6/SC	Extended Base Cylinder with "U" cam. GEN6T restricted profile, no keys
570EG6/50USC	50mm Extended Cylinder assembly with "U" cam. GEN6T restricted profile, no keys
570EG6/65USC	65mm Extended Cylinder assembly with "U" cam. GEN6T restricted profile, no keys

Assembled product MT5+

Part Number	Description
570EMT5+/SC	Extended Base Cylinder with "U" cam.
570EMT5+/50USC	50mm Extended Cylinder assembly with "U" cam. MT5+ restricted profile, no keys
570EMT5+/65USC	65mm Extended Cylinder assembly with "U" cam. MT5+ restricted profile, no keys

Screws

Part Number	Pack Size	Length (B)	Min – Max Extension (mm) If screw uncut
SRWM4-32SS	10	32	7 – 24
SRWM4-42SS	10	42	14 – 36
SRWAM4-65SS	10	65	37 – 58
SRWAM4-75SS	10	75	47 – 68

Screws are available in following sizes which can be cut and deburred to the desired length.

Modular Cylinder Extensions

Cylinder Extension Guide

Overall Cylinder Length Required	Cylinder Projection (A)*	Door Thickness		Extended Base Cylinder	7mm Extension Kit	10mm Extension Kit	24mm Extension Kit	32mm Assembly Screw	42mm Assembly Screw	65mm Assembly Screw
34	37	35	49			Standard Mortice Cylinder				
41	44	49	63	1	1			2		
50	54	63	83	1	1	1		2		
61	64	83	103	1	1	2			2	
65	68	93	98	1	1		1		2	
72	75	103	123	1	2		1			2
82	85	123	143	1			2			2
92	95	143	163	1		1	2			2

*Cylinder projection is based Selector Series Mortice Lock, Synergy Series Mortice lock projections are 1mm less.

Extension Kits

Part Number	Pack Size	Description
570/EXT07	5	7mm Extension Kit
570/EXT10	5	10mm Extension Kit
570/EXT24	5	24mm Extension Kit

Extended Cylinder Base

Part No. 570/EXT24
